

"USE OF COMPLEXES AMONG CATIONIC LIPOSOMES AND
POLYDEOXYRIBONUCLEOTIDES AS MEDICAMENTS"

ABSTRACT

The invention relates to the use as medicaments, specifically as antiinflammatories, of complexes formed by cationic liposomes and polydeoxyribonucleotides having a molecular weight in the range 7,000-60,000 Da obtainable by depolymerization of nucleic acids, wherein in said complexes the polydeoxyribonucleotides are located on the outer surface of the liposome.
